

# acknowledgments

I am grateful to the a.r.t.e.s. Graduate School for the Humanities Cologne for the fast-track PhD scholarship that was awarded to me. In addition to the financial support, I am particularly indebted to my classmates who suffered through my digital humanities ramblings for many years without themselves having anything to do with it. The feedback that I received was invaluable precisely because it came from outside perspectives.

Next, I have to thank my supervisors, especially Prof. em. Manfred Thaller, my main supervisor who was always supportive of my idiosyncrasies, granting me all the freedom to explore and shape the thesis however I liked, and Prof. Susanne Wittekind, my second supervisor who was always enthusiastic about the pathways that my work might open up in the field of art history, offering plenty of helpful advice from a discipline I had not studied. Although he was not my supervisor and I do not, in fact, know him, I also wish to thank Prof. Willard McCarty for his positive remarks on my submitted dissertation. Reading them was the most wonderful surprise.

As for the work on this publication, I have to extend my deepest gratitude to the editors of *Computing in Art and Architecture*, especially Lisa Dieckmann for encouraging me to publish the book in a form that I felt right and Piotr Kuroczyński for facilitating the publication in the series. Many thanks also to Maria Effinger from the University Library of Heidelberg for supporting my wish to publish open access and to Frank Krabbes, Bettina Müller, and the team from arthistoricum.net for assisting me during the publication process.

Now for a deep cut. This book would not exist, were it not for my involvement with the MSCA training network DiXiT (2013–2017). I think

that is fair to say. Back in the day, I was still a student, assisting Franz Fischer with the management of the project, but being able to attend all the events and meeting all the supervisors and fellows was a huge privilege with a truly profound impact on my trajectory. Elena Pierazzo, Peter Stokes, James Cummings, Peter Boots, Mats Dahlström, Dirk van Hulle, Georg Vogeler, Susan Schreibman, Marjorie Burghart, Fabio Ciotti, Arianna Ciula, Patrick Sahle – I hope I'm not forgetting anyone. Has there ever been a more illustrious group of scholars from digital scholarly editing assembled? Not in a European context. And then the next generation, Frederike Neuber, Merisa Martinez, Aodhán Kelly, Elli Bleeker, Richard Hadden, Elena Spadini, Tuomo Toljamo, Francisco Javier Álvarez Carbajal, Anna-Maria Sichani, Misha Broughton, Daniel Powell, Federico Caria, Wout Dillen, Roman Bleier, Magdalena Turska, Linda Spinazzè, Gioele Barabucci... thanks to each and every one of you. All those who have supported me over the years. Hannah Busch, Kalina Petrova, Sina Blum, Laura Schweitzer, Mel, Chey, Irit...

There are many more names to mention but I just want to give a few special thanks:

To James Cummings whose gracious comments on a small sample of my writing made me believe that I could submit the dissertation without having any of it proofread by a native English speaker.

To everyone from the Digital Medievalist Postgraduate Committee, past and present, simply for being awesome and inspiring.

To everyone from the DHd AG Empowerment, especially Sarah Lang, Nora Probst, and Anja Gerber. You're all doing such important work.

To my friends and family for taking my absent-mindedness in their stride and helping me get to this point. For keeping the lights on when I worked at night.

To Ianto, my sister's family dog, the best lab in the world, whom I could not hug one last time because it was March 2020 and there was a pandemic and when the vet assistants came, we had to keep our distance. Sometimes I still think you will come through the door. Farewell, sweet boy.
