This book gives statistical information about the chronological development of the use of Latin words throughout the history of the language, from the fourth century BCE to the early sixth century CE. Based on the computational analysis of the works of 309 Latin authors, fragmentary and anonymous texts, and 521,532 epigraphs, this innovative resource helps scholars to explore the usage of Latin words across different time periods and linguistic registers, offering statistical insights to support philological, linguistic, and literary analysis.
