

## ACKNOWLEDGEMENTS

Recent research at Solutré was undertaken as a co-project between the Römisch-Germanisches Zentralmuseum Mainz, Forschungsbereich Altsteinzeit in Neuwied, the excavator of the Solutré site, Jean Combier, and the Direction régionale des affaires culturelles (DRAC) de Bourgogne in Dijon.

My main thanks are due to Jean Combier for his permission to study the material from sectors P16 and I11 at Solutré, for his friendly interest, support and for his hospitality during my stays in Solutré. Thanks are also due to Claude Mordant (once DRAC, now Université de Bourgogne) and Yves Pautrat (DRAC) in Dijon.

In 1994, the finds from Solutré were stored at La Grange du Bois, and my analysis of the material began in this building. Alfred Aufranc (†), at that time overseer of the Solutré collections, will always be remembered for his friendliness and his hospitality on numerous occasions during my stay in Solutré.

In 1995, the finds were moved into storage in the new offices of the Musée Départemental de Préhistoire de Solutré in Solutré village, and my study of the material continued in these premises until the end of 1996. Thanks are especially due to Geneviève Lagardère, the conservator of the museum, for her friendly help at all times. Thanks also go to Martin Street for permission to use unpublished data about the Andernach-Martinsberg site. Hubert Berke (Cologne) gave me permission to reproduce the diagram from his article on the Magdalenian faunas. Finally, I would like to thank my colleagues in the draughting department of the institute at Neuwied; Anne Hidién-Schlachter and Gabi Rutkowski prepared the figures and Regina Hecht prepared the plates.
