

# List of Illustrations

Figure 1:	Location of Koumasa within Crete.	7
Figure 2:	Location of Koumasa, within its region.	7
Figure 3:	Geology of the west and central Messara-Asterousia.	12
Figure 4:	The area of Koumasa with a DEM produced Orthophoto.	14
Figure 5:	Slope of Koumasa in degrees and contour lines.	15
Figure 6:	Six parallel section cuts of 300 m. with northwards view.	16
Figure 7:	Five parallel section cuts of 400 m. with southwestern view.	17
Figure 8:	View westwards from the Terrace area of the ‘sanctuary’ near Peak 1.	18
Figure 9:	The southern front and the gorge. View westwards.	19
Figure 10:	View to the north from the settlement.	20
Figure 11:	Settlement plateau, elevation of ‘sanctuary’. View towards the north.	20
Figure 12:	View to the Korakies Hill from the area of the tholoi.	22
Figure 13:	The plotted locations of the toponyms mentioned by Ptolemy (Ptol. 3.5.14) and the concordance with the actual locations.	57
Figure 14:	Koumasa as a node between the valley and the mountain.	68
Figure 15:	Comparison of modern and ancient Koumasa.	72
Figure 16:	Produced four-colour map, following the traditional map norms.	78
Figure 17:	Flow accumulation in the valley in the immediate north of Koumasa.	80
Figure 18:	Cross-section cuts of the Asterousia along 10 km. lines, with view eastwards.	83
Figure 19:	Overview and plotting of the functions under discussion.	114
Figure 20:	The extent of the acquired 20m.-DEM model.	121
Figure 21:	Calculated slope on the 20m.-DEM after removal of zero value (sea level).	122
Figure 22:	Calculated slope of the 30m.-DEM, after removal of zero value.	123
Figure 23:	Least-cost paths from Koumasa to chosen locations; interpolation of 4 functions. Based on 20m.-DEM.	125
Figure 24:	Least-cost paths from Koumasa to chosen locations on 30m.-DEM; interpolation of 3 functions.	128
Figure 25:	Least-cost paths from Phaistos to chosen locations on 30m.-DEM; interpolation of 2 functions.	129

## List of Illustrations

Figure 26:	Least-cost paths between Koumasa and the locations of Apesokari, Trypiti, Salamias bay, Ayios Ioannis, Dhamantri.	131
Figure 27:	Cost Distance without the value 0.	133
Figure 28:	Overlapping two calculated least-cost paths showing the different paths from the two iterations.	135
Figure 29:	Implementing the cutting off of cells from the slope raster at different values.	137
Figure 30:	Least-cost paths from Koumasa to peripheral points, based on the slope raster.	139
Figure 31:	Least-cost paths from Koumasa to peripheral points, based on the Ox-cart function.	139
Figure 32:	Accumulated cost surface for the Messara-Asterousia region of Koumasa on the 20m.-DEM.	142
Figure 33:	Accumulated cost surface for the region around Koumasa on the 20m.-DEM.	143
Figure 34:	Isochronous bands on the accumulated cost surface of the 20m.-DEM.	144
Figure 35:	Isochronous lines on the accumulated cost surface of the 30m.-DEM.	144
Figure 36:	Flow accumulation from Koumasa, on cost raster based on 30m.-DEM.	146
Figure 37:	Flow zpaths, based on a cost raster defined with Tobler's function.	147
Figure 38:	Flow accumulation paths, based on a cost raster defined with Bell-Lock's function.	147
Figure 39:	Interpolation of the two former iterations for the immediate vicinity of Koumasa.	148
Figure 40:	Flow accumulation paths based on the cost raster defined with the Exponential function.	149
Figure 41:	Grid points around the Messara.	151
Figure 42:	Network connectivity for the Messara area.	152
Figure 43:	Network connectivity for the Koumasa area.	152
Figure 44:	Schematic rendering of paths around central Asterousia.	153
Figure 45:	Viewshed of Koumasa, calculated on the 20m.-DEM.	155
Figure 46:	Viewsheds of Koumasa and Apesokari, calculated on the 20m.-DEM.	156
Figure 47:	Viewshed from Kophinas, based on the 20m.-DEM.	156
Figure 48:	Reciprocity of the visibility between Kophinas and the sea level at Cape Lithino.	158
Figure 49:	Water drainage basins of the Messara, with Strahler Order 3 and above. Computed on the 30m.-DEM.	159

Figure 50:	Water drainage basins of the Messara, with Strahler Order 4 and above. Computed on the 30m.-DEM.	159
Figure 51:	Water drainage basins of the Messara, with Strahler Order 5 and above. Computed on the 30m.-DEM.	160
Figure 52:	Water drainage basins of the Messara, with Strahler Order 6 and above. Computed on the 30m.-DEM.	160
Figure 53:	Water drainage basins of the Messara as in Figure 50, including locations of tholoi.	161
Figure 54:	Water drainage basins of the Messara as in Figure 51, including locations of tholoi.	162
Figure 55:	Water drainage basins of the Messara as in Figure 54, concentrating on the Geropotamos catchment.	162
Figure 56:	Water drainage basins of the Messara, as in Figure 54, including reference locations.	163
Figure 57:	Watershed of the area of Koumasa, computed on a 28cm.-DEM.	171
Figure 58:	Watershed of the area of Koumasa, computed on a 28cm.-DEM.	172
Figure 59:	Iteration 1. Viewshed from points to the immediate west of the Korakies hill.	173
Figure 60:	Iteration 2. Viewshed from points on the settlement's plateau.	174
Figure 61:	Iteration 3. Viewshed from points along the western path (western corridor).	175
Figure 62:	Iteration 4. Viewshed from the point of an observer standing 3 m. above the column base of Room 4, approximating standing observers on the roof of the building in Room 4.	176
Figure 63:	Iteration 5. Viewshed from the point of observers standing on the roof of the second floor of Rooms 3 and 4.	177
Figure 64:	Reclassified slope of the 1m-DEM.	179
Figure 65:	Iteration 1 of least-cost-path analysis on the 1m.-DEM.	180
Figure 66:	Iteration 2 of least-cost-path analysis on the 1m-DEM.	181
Figure 67:	Interpolation of iteration 2, with and without reclassification.	182
Figure 68:	The main area of the 'sanctuary'.	187
Figure 69:	Two horizontal section cuts.	188
Figure 70:	Two vertical section cuts.	189
Figure 71:	Interpolation of the modern landscape and photograph D-DAI-ATH-Kreta-0157, with 0%, 50%, 75% and 100% transparency of the original image.	197
Figure 72:	Interpolation of the modern landscape and photograph D-DAI-ATH-Kreta-0158, with 0%, 50%, 75% and 100% transparency of the original image	198
Figure 73:	The main area of the 'sanctuary' and access possibilities to Room 1.	199
Figure 74:	Room 4 with the distances of the column base to the walls.	203

## List of Illustrations

Figure 75:	Space syntax for the area of the ‘sanctuary’.	218
Figure 76:	Rendering the effect of 3m structures at Rooms 4, 3 and NE area, as seen from the middle of the plateau.	223
Figure 77:	Column base in Room 4.	225
Figure 78:	The five regions of the Asterousia.	238
Figure 79:	The western half of the Asterousia, in the middle of which the Koumasa Region is located.	238
Figure 80:	Topography of the immediate vicinity of Koumasa.	241
Figure 81:	Viewshed from the Koumasa settlement and from the level of the Koumasa tholoi and settlement.	244
Figure 82:	Intervisibility network between the tholoi.	245
Figure 83:	Intervisibility Network from Koumasa, seen from the tholoi and the Korakies hill.	245
Figure 84:	Viewsheds of the four mountainous tholoi of western-central Asterousia.	247
Figure 85:	Intervisibilities of the tholoi mentioned above.	247
Figure 86:	Flow accumulation from Koumasa with an overlap of locations of interest.	249
Figure 87:	Water drainage channels of central Asterousia and southern Messara; computed on 30m.-DEM.	255
Figure 88:	Water drainage channels of central Asterousia and southern Messara; computed on 20m.-DEM.	256
Figure 89:	Water drainage channels of values 4 and above as per Strahler Order in the region around Koumasa, including places of interest.	257
Figure 90:	Water drainage channels with places of interest, interpolated with the view of Figure 80.	258
Figure 91:	Bell-curve of the distances of Necropoleis to streams of value 4.	260
Figure 92:	Illustration of the documented paths within central Asterousia.	285
Figure 93:	Above: first glimpse of the Trypiti bay and Phylakas promontory. Christos settlement and tholoi behind the Volakas hill on the right. Below: view towards the Volakas hill beyond the Gourlofarango gorge. Christos tholoi and settlement on the other side of the hill.	288
Figure 94:	Evans’s “Chasm”, beyond which lies the secluded Trypiti bay.	290
Figure 95:	View from Hill 1. First glimpse of the sea.	293
Figure 96:	View from Hill 2. View from Hill 2.	293
Figure 97:	Salamias bay, as viewed at the beginning of the final third section of the path, beneath Seferis. The steepness of the mountain is visible.	294
Figure 98:	View of Ayios Ioannis from Seferi. To the north (left) Kophinas peak is visible.	297
Figure 99:	First glance of the seashore and Kophinas peak.	298

Figure 100:	The area around Trypiti with locations of archaeological interest. To the east overlapping with the map in Figure 102.	302
Figure 101:	View from the Kalokampos and the area of the tholos looking westwards, with the promontories of Phylakas and Trachoulas in the background.	303
Figure 102:	The area around Salamias with locations mentioned. To the west, overlapping with the map in Figure 100.	305
Figure 103:	View from the Salamias tholos towards SE.	306
Figure 104:	Scattered sherds near the Salamias coast.	307
Figure 105:	View of Salamias bay from its western promontory.	308
Figure 106:	View of Ayios Ioannis Bay as approached from the west.	310
Figure 107:	The area around Ayios Ioannis with locations mentioned. To the west overlapping with the map of Figure 102.	311
Figure 108:	View to the Ayios Ioannis bay from the north.	312
