

ACKNOWLEDGEMENTS

First and foremost, I would like to thank my supervisor, Maria Ivanova, for her support, scientific guidance, and patience, without whom this work would not have been possible. Her project, “Food Cultures: Interdisciplinary Studies of Early Farming, Food Technology, and Palaeodiet in Southeastern Europe,” funded by the German Research Foundation (DFG) (Grant Number: IV/5-1), not only enabled this research but also introduced me to new horizons in Neolithic studies.

The residue analysis would not have been possible without the collaboration of many archaeologists who provided the samples. I am deeply grateful to Branka Zorbic (Kragujevac), Tibor Marton (Budapest), Kristián Oross (Budapest), Nadezhda Todorova (Sofia), Vanya Petrova (Sofia), Jesna Vuković (Belgrade), Eszter Bánffy (Frankfurt), Krassimir Leshtakov (Sofia), Krum Bacvarov (Sofia), Clive Bonsall (Edinburgh), and Adina Boroneant (Bucharest).

At the beginning of my PhD, I was introduced to the world of organic chemistry and the extraction of lipid residues by the Organic Geochemistry Unit (OGU) at the University of Bristol. While all members were a delight to work with, I would like to extend special thanks to Richard Evershed and Mélanie Roffet-Salque for their time, instruction, support, and advice throughout my studies. I also wish to thank Lucy E. Cramp, Helen L. Whelton, Julie Dunne, Emmanuelle Casanova, Alice Charteris, Alison Kuhl, Illi S. Johari, and Katrina Pears for their help and for many unforgettable discussions.

In researching food culture and Neolithic developments, I met great colleagues and friends who inspired me and shed light on many questions. Thank you, Henny Piezonka (Kiel), Delphine Frémondeau (Reading), Marie Balasse (Paris), Christian Ressel (Kiel), John Gorczyk (Cornell), Maleen Leppek (Munich), and Estelle Camizuli (Nanterre), for your input and kindness. I am also grateful to Joseph Maran, not only for his guidance during my time in Heidelberg but also for introducing me to new theoretical avenues that continue to inspire my research.

I would also like to express my sincere gratitude to Alexander Johannes Edmonds for his generous help with language corrections and stylistic suggestions throughout this text. All remaining errors are, of course, my own.

Finally, I would like to thank my family for their unconditional support: my mother, Chantal Leonard, for her encouragement and faith in me; my niece, Méliane Ethier Lapierre, for her curiosity and love of knowledge that inspired this work; and Veronika Egetenmeyr, whose belief in me and unfailing support I deeply cherish. From the bottom of my heart, I thank you all.

Koblenz, October 2025
