

The Pilgrimage near and within the Valley of Tempi in Thessaly during the Middle-Byzantine Period: Historical and Archaeological Data*

Our paper deals with the presentation of new historical and archaeological data concerning the pilgrimage in the valley of Tempi in Thessaly during the middle-byzantine period (fig. 1).

Recent archaeological research was carried out in the site »Kokkonas hanik (not far from the modern pilgrimage center of Hagia Paraskevi)¹. In 2008 and 2009, there were unearthed, near the ruins of an early Christian settlement and cemetery² and to the west, the remains of an important middle-byzantine complex of a byzantine church with graves (fig. 4, 5) and a monumental inn³ (fig. 2, 3). The latter is a longitudinal (27 m × 6,70 m) building, of tripartite space organization (the central room is 14 m long), once adjoining other secondary and smaller structures. In a distance of 2,20 m from the northern wall were discovered the poor remains of six rectangular piers. These piers once incorporated in their upper parts the pair of beams which supported the wooden balcony of the second floor of the building. The balcony and the roof, should have been almost identical to analogue wooden structures of the traditional architecture of Northern Greece. Access to the upper floor was gained through wooden stairs under the floor of the balcony or adjacent to the northern wall of the building.

In the last building phase when the front piers and balcony were destroyed, access to the upper floor was possible via two stairs which were built over the rectangular structures adjoining the northern wall.

The absence of archaeological finds makes it difficult to date the building. Based on two coins of the Byzantine Emperor Basil I the Macedonian (867-886) found under the pavement of the first and main phase of the building and

could be considered as a *terminus post quem* for its construction, a dating to the 10th century is quite possible.

The longitudinal plan of this structure (fig. 3), as well its position in the western entrance of the valley of Tempi, in a distance of 10 m from the road which was the principal artery of mainland Greece, supports the hypothesis of its identification with an inn of the byzantine period, possibly built on the site of an older Roman station. Almost identical is the plan of the first phase of the byzantine inn of Pydna in the nearby Prefecture of Pieria⁴ and other buildings of the same use⁵. Until now there are many hypotheses on the sites of the stations across the main road of the valley of Tempi, according to the *Tabula Peutigeriana*⁶ and other roman itineraries⁷. The station *Stenon* or *Stenai* (*mansio Stenai*) is generally located to the eastern entrance of the Tempi, near the site »Palio-kklisi», on the basis of the discovered *miliaria*⁸, while the station Olympou (*mansio Olympou*) to the western entrance, near Evangelismos⁹. In the above-mentioned itineraries are also mentioned smaller stations which were not identified. One of them, the *mutatio Thuris* could be probably identified to our building. It is important that it is located in the middle of the distance before the two first stations (which is 12 km) and directly just after the exit of the narrow part of the valley, where there was needed an urgent pause for rest, as it was described by travelers of the Ottoman period who stopped in the nearby Hani of Kokkona¹⁰.

This building was certainly an inn for pilgrims and other travelers on their way to central and southern Greece.

To the east of the inn the remains of a church with graves were excavated. The poor findings of the graves are dated to the 11th-12th century¹¹, while the church could be attributed

* I am deeply indebted to Mrs Stavroula Sdrolia, Director of the Ephorate for Antiquities of Larisa for giving me the permission to visit and study excavation sites in the valley of Tempi and for her kindness to provide me photographic material and plans from her excavations in the site »Kokkonas hanik».

to the period before¹². The lack of any ceramic finds in the church do not enable its dating. Therefore, the structure could be attributed to the middle-byzantine period, possibly to the 9th-10th century, due to the resemblance of the masonry in its apses and southern wall with parts of the masonry of the »inn«. It is quite possible that the church and the »inn« were built in the same period. The type of the church with an ambulatory of Π shape can be found in the nearby Pieria¹³,

as well as to the church unearthed in the acropolis of Larisa¹⁴ (fig. 6). The three semi-circular apses – a rather »archaic« feature in Middle Byzantine Ecclesiastical architecture – are also to be found in the church of Panagia in Vathyrema Agias, also in Thessaly¹⁵. We know that from the end of 11th century the semicircular apses of the churches are substituted by tripartite ones¹⁶. One more »archaic« element is also the almost square plan of the church (analogy 1 to 1). This type of the church

with an ambulatory is probably not the first one, because it seems that it was built over older ruins.

Consequently, and based on our remarks, the initial phase of the church could be ascribed to the 10th century, while its destruction by fire could have been possibly related to some invasions of the 11th century, like those of the Normans that besieged the castle of Larisa¹⁷. Later on, the church was used as a cemetery church, while the southern aisle was transformed to a church. Its seems that the church was abandoned to the end of 12th or during the first half of 13th century, judging by the discovery of a golden coin of the Latin Kingdom of Jerusalem which was unearthed over a simple grave above the other graves to the North of the church¹⁸. The abandoning of the site is possibly related to the capture of the region by the Latin troops of the Fourth Crusade in 1204.

The church was ecclesiastically placed under the jurisdiction of the Metropolis of Lykostomion or Thessalian Tempi which is mentioned in 10th century byzantine sources as being under the Metropolis of Thessaloniki¹⁹. The seat of this bishopric, which included settlements of southern Macedonia and northern Thessaly was transferred, before the middle of 14th century, from Lykostomion to the fortress of Platamon²⁰. The settlement of Lykostomion and the homonymous bishopric were located by A. Vacalopoulos in the wider area of the Castle of Oria, in a distance of two kilometres to the north of our complex²¹. This opinion was also supported by N. Pa-

padimitriou²². In recent years scholars also supported that the Lykostomion was built not within the valley of Tempi, but near its northern exit, at the place of the present-day village of Pyrghetos²³. As for the Castle of Oria²⁴, I believe that we should exclude its identification with Lykostomion, since it is a narrow passage with many fortified posts, difficult to access. The Castle of Oria was certainly a military station or a fortress with a permanent garrison and a secure refuge for soldiers and travelers. In the vicinity of the lowest part of the castle there are some caves for hermits which are unexplored.

The character of our complex (church and inn) could be the one for the pilgrimage, due to the fact that it is located over a fully travelled main road artery and in the station of Tempi, as well its vicinity to a Hellenistic temple. It is certain that the church was visited not only by pilgrims but also by the numerous travelers in their way to southern Greece. The monumental character of the structures leads to the hypothesis of an important founder of our complex, probably under the state initiative, which aimed to the reorganization of the byzantine provinces and the mainland communications of the early 10th century.

A second site for pilgrimage, located near the northern »entrance« of the valley of Tempi, is to be found in the present-day village of Pyrghetos. The monumental, unpublished church of Hagios Georgios²⁵, consists of the initial triconch church (fig. 7) and the 18th century monumental narthex.

22 Papadimitriou, Ē episkopē 117-121.

23 Gouloulis/Xynogala, Lykostomion tōn Tempōn 470-471. 473-475.

24 The castle of Oria is not a single fortified unit. See Vacalopoulos, Ta kastra tou Platamōna 87-109. – Theodoropoulos, Kastro tēs Orias 90-105. See also Sdrolia/Androudis, byzantines ochyrōseis.

25 For the church see Dimitsas, Makedonia 157. – Roussas, Agios Geōrgios Pyrgetou. – Gouloulis/Xynogala, Lykostomoi tōn Tempōn 473-474 fig. 2, 3.

Fig. 7 Pyrghetos, the byzantine triconch church seen from the North. – (Foto P. Androudis).

Based on the form with large semicircular apses and on other data, such the difference of one meter between the external level to the North and the internal level of the church, as well as the presence of a marble window mullion, serving today as a support for the altar of the church, we could possibly attribute the first phase of the building to the 9th or the early 10th century.

We strongly believe that this triconch church, which we plan to publish after the removal of some parts of its external plaster and the study of its masonry, was built probably as a *martyrium* (for the cult of St George) and served this purpose for a long time.

A Greek inscription of the byzantine period, immured in the south wall of the narthex (fig. 8) mentions the term *philoxeniēn*, certainly related to pilgrimage. The text is carved in four lines and reports:

Ἐκθύμως φιλέων δίδυμον κορυφὴν ἀρετάων,
εὐθυτάτην πίστιν ἡδὲ φιλοξενίν.
τῶν μετα καὶ συναπῆρεν ἀπὸ χθονὸς ἐς βίον ἄλλον,
ξείνοισι προλιπῶν καὶ γε πένησι πόθον²⁶.

Desiring with all his soul a twin peak of virtues,
The straight faith and the hospitality,
With them he left from the earth to the other life,
Leaving desire to foreigners and poor people

This inscription which was discovered by Leon Heuzey²⁷, was published by Margaritis Dimitras²⁸, but it has not until now acquired all the importance that it deserves.

Fig. 8 Church of Hagios Georgios, the byzantine inscription. – (Foto P. Androudis).

The type of letters of the inscription could be possibly compared to those in the inscriptions on the mosaics of the church of Hagia Sophia in Thessaloniki. The value of the inscription of Pyrghetos is quite significant, if we consider that in the whole Prefecture of Pieria there were recorded no more than ten byzantine inscriptions²⁹.

The spiritual work of this anonymous ecclesiastical man (a bishop?) honored here is certainly the faith (that means the ecclesiastical activity) and the hospitality towards ξένων (strangers) and πενήτων (poor people). Despite the fact that there are not mentioned any names or other historical data, this inscription could be relied to all the mobility on the public road or the port of Pineios (itinerary Thessaloniki-Thessaly), mainly during 9th-11th centuries, when many foreigners (pilgrims included) were passing through this area. The πένητες could possibly be identified to the poor people of the region or to the poor travelers.

The ancient main road to central mainland Greece served not only military, but also religious purposes. This main road artery for Thessaly and Macedonia acquired special importance in 9th-10th century³⁰. It is noteworthy that in 9th-10th century the pilgrims from Italy or those who wanted to go to Italy used the main public road instead of Via Egnatia (Dyrrachium-Constantinople), because of the danger of Bulgarian attacks³¹.

One important *desideratum* of the scientific research in Tempi remains the identification of the site of Lykostomion, seat of a bishop until the late byzantine period, when the bishopric was transferred to the more secure Castle of Platamon³². This identification could offer many responses to unsolved questions of local topography. Some scholars, like A. Vacalopoulos, tend to identify Lykostomion with the present-day village of Tempi, the former Turkish village of Baba, which was also a major place for pilgrimage for the *bektashi* tekke of Hasan Baba (and the *türbe* of this Ottoman dervish saint)³³.

Fig. 9 Map of the unearthed monasteries on the »Mount of Cells«. – (S. Sdrolia).

We should also mention that pilgrimage routes and related sites in the region are not only limited within the valley of Tempi, but can be found in the nearby monastic community of the so-called »Mount of Cells« (*Όρος των Κελλίων*)³⁴. In this area, monastic life evolved from 9th century onwards³⁵ and many monasteries of the 11th-12th centuries were unearthed by the excavations of Dr. S. Sdrolia³⁶ (fig. 9). The monastery of Panagia and Hagios Demetrios at Stomion (former Tsagezi) has retained its importance not only for pilgrims, but also for other believing Christians down to the present day³⁷ (fig. 10).

Fig. 10 The katholikon of the monastery of Stomion (Tsagezi). – (After A. Normand [1851]).

The hagiological writings of the Blessed Christodoulos inform us that in 1088, five years after his victorious campaign against the Normans of Bohemund who besieged Larisa³⁸, the Greek emperor Alexios I Komnenos suggested to Christodoulos that he should undertake the administration of Cells, where there had been some slackening in the morals of the monastic community. Christodoulos had compiled a »Canon« or formal set of regulations, which Alexios described as an echo of the Holy Spirit itself, but the monks were not compliant³⁹. Unfortunately, the monks of the Cells received Christodoulos's decrees with great bitterness and thus the man sought and received the post of *higoumenos* (abbot) on the island of Patmos.

Before Christodoulos the region was visited by the saints Varnavas and Sophronios, the ktitors of the monastery of Panagia Soumela, not far from Trebizond (in E. Pontos, Black Sea)⁴⁰, as well as the Saints Symeon and Theodoros, the ktitors of the monastery of Mega Spilaion in Peloponnese⁴¹. In around 980, on his way from Athens to Thessaloniki, Hosios Fantinos from Calabria, Italy, stayed in the basilica of Saint Achillios at Larisa and also passed from Tempi⁴². Also in the third book of the Miracles of Saint Demetrios, pilgrims from Italy (*Ιταλιώται*) passed through Tempi on their way to Thessaloniki. There Saint Demetrios informed them in order to avoid the capture of the Saracens (904)⁴³. The same book refers to the legendary »meeting« of the Saint Demetrios of Thessaloniki and Saint Achillios of Larisa in the northern »exit« of the

valley of Tempi in the beginning of 10th century, when their cities were captured⁴⁴. According to S. Gouloulis, the »presence« of Saint Demetrios in the valley of Tempi had a symbolic role: the saint aimed to be the protector not only of the city of Thessaloniki (against the Sklavenoi), but also of the rest of mainland Greece, against the new enemy, the Bulgarians⁴⁵.

In our paper we presented some new archaeological data on sites related to pilgrimage and monastic sites within and just outside the valley of Tempi in Thessaly. There are im-

portant buildings (church and inn in Hani Kokkonas, an old triconch church in Pyrghetos) and an also important拜占庭 inscription related to hospitality. We hope that in the future new data will come to light and, in our opinion, it should be examined the relationship of the pilgrimage in the wider region of Tempi and the oriental coast of Thessaly with Thessaloniki where the monastic community of the Mount of Cells evolved in 11th and 12th centuries.

Zusammenfassung / Summary / Résumé

Pilgerschaft in und um das Tempi-Tal, Thessalien, in mittelbyzantinischer Zeit: historische und archäologische Daten

Unser Beitrag befasst sich mit der Präsentation historischer und archäologischer Daten über die Wallfahrt in und um das Tempi-Tal in Thessalien/GR in mittelbyzantinischer Zeit.

Archäologische Untersuchungen bei »Kokkonas hani« resultierten in der Ausgrabung von Überresten eines mittelbyzantinischen Komplexes einschließlich einer Kirche mit dazugehörigen Gräbern sowie einer Längsstruktur. Der Plan der letzteren und seine Lage in der Nähe einer häufig benutzten Hauptverkehrsader Griechenlands stützen die Hypothese seiner Identifizierung als ein byzantinisches Gasthaus für Pilger und andere Reisende auf ihrem Weg zum zentralen und südlichen Festland. Die Kirche dürfte dem 9.-10. Jahrhundert zugeschrieben werden.

Der Charakter der Strukturen lässt einen bedeutenden Gründer vermuten, wahrscheinlich verbunden mit der staatlichen Initiative, die darauf abzielte, die byzantinischen Provinzen und die Festlandskommunikation des frühen 10. Jahrhunderts zu reorganisieren. Ein zweiter Wallfahrtsort in der Nähe des nördlichen »Eingangs« von Tempi ist die monumentale Dreikonchenkirche von Hagios Georgios im Dorf Pyrghetos, die wahrscheinlich als Martyrium (des hl. Georg) erbaut wurde und diesem Zweck lange diente. Eine byzantinische Inschrift im Narthex nennt das Wort *philoxeniēn* (Gastfreundschaft), das mit dem Begriff Wallfahrt in Beziehung gebracht werden kann. Die Haupttugenden des anonymen Kirchenmanns, der hier geehrt wird, sind Glaube und Fremdenliebe. Diese Inschrift könnte mit allen Personen in Verbindung stehen (einschließlich Pilgern), die auf der öffentlichen Straße oder zum Hafen von Pineios (Route Thessaloniki-Thessalien) unterwegs waren, hauptsächlich im 9.-11. Jahrhundert.

Die alte Hauptstraße nach Mittelgriechenland diente nicht nur militärischen, sondern auch religiösen Zwecken. Diese Hauptverkehrsader für Thessalien und Makedonien erhielt im 9.-10. Jahrhundert eine besondere Bedeutung, da sie sowohl von Heiligen als auch von Pilgern genutzt wurde, die diese Route anstelle der Via Egnatia gewählt hatten. Wir sollten auch erwähnen, dass die Wallfahrtsorte in der Region nicht nur auf Tempi beschränkt sind, sondern sie sind auch auf dem nahe gelegenen Berg Kissavos, dem »Oros tōn Kelliōn« zu finden, wo sich seit dem 9. Jahrhundert das monastische Leben entwickelte. Hier wurden viele Klöster des 11. und 12. Jahrhunderts durch Ausgrabungen freigelegt.

Pilgrimage Within and Around the Valley of Tempi in Thessaly During the Middle-Byzantine Period: Historical and Archaeological Data

Our paper deals with the presentation of historical and archaeological data concerning pilgrimage within and around the valley of Tempi in Thessaly/GR, during the middle-Byzantine period. Archaeological research at the site »Kokkonas

hani« unearthed the remains of a middle-Byzantine complex, including a church with associated graves as well as a longitudinal structure. The plan of the latter, and its position near a frequently travelled principal artery of Greece, support the hypothesis of its identification as a Byzantine inn for pilgrims and other travellers on their way to the central and southern mainland. The church should be ascribed to the 9th-10th century.

The character of the structures leads to the hypothesis of an important founder, probably associated with the state initiative that aimed to reorganise the Byzantine provinces and mainland communications of the early 10th century. A second site for pilgrimage, near the northern »entrance« to Tempi, is the monumental triconch church of Hagios Georgios in the village of Pyrghetos, probably built as a martyrium (of St George) and which served this purpose for a long time. A Byzantine inscription in its narthex mentions the term *philoxeniēn* (hospitality), certainly related to pilgrimage. The main virtues of the anonymous churchman who is honoured here are faith and hospitality. This inscription could be related to all those who travelled (pilgrims included) on the public road or to the port of Pineios (itinerary Thessaloniki-Thessaly), mainly during the 9th-11th centuries.

The ancient main road to central Greece served not only military, but also religious purposes. This principal road artery for Thessaly and Macedonia acquired special importance in the 9th-10th century, since it was used both by saints and pilgrims who chose this route instead of the Via Egnatia. We should also mention that pilgrimage sites in the region are not only limited to those within Tempi, but can be found on the nearby »Mount of Cells«, Mount Kissavos, where monastic life evolved from the 9th century onwards, and many monasteries of the 11th-12th centuries were unearthed by excavations.

Le pèlerinage aux alentours et dans la vallée de Tempi, Thessalie, à l'époque mésobyzantine : données historiques et archéologiques

Cet article se penche sur les données historiques et archéologiques concernant les pèlerinages tout autour et dans la vallée de Tempi en Thessalie (Grèce) durant l'époque mésobyzantine.

Des fouilles archéologiques sur le site de « Kokkonas hani » ont mis au jour les vestiges d'un complexe de l'époque mésobyzantine comprenant une église, des tombes et une structure longitudinale. Le plan de celle-ci et sa position à proximité de l'axe principal et très fréquenté de la Grèce renforce l'hypothèse d'une auberge byzantine pour les pèlerins et autres voyageurs en route vers le Centre ou le Sud de la Grèce continentale. L'église devrait dater des 9^e/10^e siècles. Le caractère des structures suggère un fondateur important, probablement à l'initiative de l'État qui voulait réorganiser les provinces byzantines et les voies de communication du continent au début du 10^e siècle.

Près de l'« entrée » nord de Tempi se situe un deuxième lieu de pèlerinage, l'église triconque monumentale d'Agios Georgios dans le village de Pyrghetos qui fut probablement construite comme martyrium (de saint Georges) et garda cette fonction pendant longtemps. Une inscription byzantine dans le narthex mentionne le terme de *philoxeniēn*, certainement lié au pèlerinage. Le travail spirituel de cet ecclésiastique anonyme honoré ici consiste à vivre sa foi et accueillir les étrangers et les démunis. Cette inscription pourrait renvoyer à tout voyageur en route (pèlerins inclus) sur les voies publiques ou sur le port de Pineios (itinéraire Thessalonique – Thessalie), particulièrement du 9^e au 11^e siècle.

L'ancienne route principale menant à la Grèce centrale ne répondait pas seulement à des besoins militaires, mais également religieux. L'artère principale pour la Thessalie et la Macédoine acquit une importance toute spéciale aux 9^e et 10^e siècles, non seulement pour les saints, mais aussi pour les pèlerins qui l'utilisèrent comme alternative à la via Egnatia. Il faut également mentionner que les lieux de pèlerinage ne se limitent pas à la vallée de Tempi, mais existaient aussi non loin sur les flancs du « Mount of Cells », la montagne de Kissavos, où la vie monastique s'épanouit à partir du 9^e siècle et où furent fouillés de nombreux monastères des 11^e et 12^e siècle.
