

PhD/Master Session 2019

Chair:

Martina POLIG, Science and Technology in Archaeology Research Center (STARC), Cyprus

A crucial aspect of the conference „Cultural Heritage and New Technologies“ was that it brought together researchers from different fields and backgrounds, creating a platform that enables and promotes the exchange of ideas. This discussion could only benefit from the input and perspectives of the young scientific generation. Their participation enriched the scientific ambient with their fresh views as well as gave them the opportunity to confront themselves with their peers in the context of an international conference. Therefore, we invited students and recent graduates to present their ongoing or finished Master or PhD thesis at the conference. New ideas, new ways of thinking, clever solutions, workarounds and critical thoughts were especially welcomed.

The topic of the presentation was within the scope of cultural heritage and new technologies. However, presentations that were within this year’s main topic “Monumental Computations – Digital archaeology of large urban and underground infrastructures” were given preference. The session wanted to encourage young scientists to present for their first time at an international conference. Only presenters, who had not yet given a presentation at this conference were accepted for this session. To facilitate and encourage the participation the conference organizers agreed that every presenter will get free admission to the conference.
