

RARE

Elaine and Martin during excavations at the Late Upper to Late Palaeolithic site of Andernach-Martinsberg, when dungarees were at the height of fashion, 1982.

Translated into German, “rare” means “bloody” and as we are all aware “bloody” comes with a *lot* of possible connotations.

Elaine and Martin probably cursed more than once when they took up the enormous challenge of dealing with the research at sites such as Gönnersdorf, Andernach-Martinsberg, Solutré or Taforalt – comprising mega-archives indicating new, more effective and sustainable survival strategies since the post-LGM. Each of these archives can occupy you for a lifetime (which is in fact what we can observe looking at both their scientific careers) and finding a way through the labyrinth of evidence requires a lot of discipline to not get lost. Elaine and Martin mastered this task brilliantly and trying to summarise all their findings in this context in a few sentences provides us in turn with a challenge that makes us curse.

Just so you know – it was very “rare” that making a living was easily mastered in the past, as numerous rules and regulations had to be taken into consideration. Our personal favourite contribution in this instance refers to their “feather in one’s cap” publication where they provide us with a very black and white perspective on fashion during Magdalenian times (Street and Turner, 2016).

The Andernach Team, ca. 1981/82, Martin in the background, looking sceptical.
